## **CIRCUMCISION – AFTER CARE INSTRUCTIONS**

After the circumcision, the physician will cover the penis with a Vaseline gauze. The gauze will stay in place for 4 days before falling off. After 4 days, continue care by applying Vaseline over the diaper area that will cover the penis, or apply Baby Oil onto the penis. If the gauze does not fall off, remove after 4 days and continue care as above.

Once the circumcision area is dry, you can discontinue the care instructions listed above. If the infant is fussy, it is okay to give him some infant Tylenol.

Follow up in 7-10 days, as instructed by the Physician.
